Catalogue **2023**

www.castelcanada.ca

Castel presents its new 2023 collection. An extraordinary experience in design, innovation, and avant-garde. Exclusive materials with unique aesthetic possibilities, manufactured mainly in Italy and Spain, bringing together the best of each region, to create exceptional environments and better spaces for your life.

Discover in this catalog the most exclusive products that you can use in the creation and remodeling of magnificent projects, from a house to large-scale works.

Castel develops products of the highest quality, with the latest trends in design and durability, which today cover millions of square meters.

Here you will find endless options with guaranteed quality in floors, walls, toilets, faucets, bathroom furniture, doors, sinks, and natural stones that make Castel one of the fastest-growing brands in the construction industry in the years nationally and internationally and with greater exposure in the Mexican market. We are a reliable company with international standards.

Use the 2023 Catalogue for your inspiration, develop your creativity in decorating spaces, and choose which products you can use to create your own style. Find us in the more than 1000 Authorized Distributors throughout Mexico. By purchasing Castel products you will have the security of having invested in innovative products for the creation of any architectural design.

Let your spaces speak for you, you deserve the best finishes that represent more than a style.

Check why Castel Porcelain is the finest of all Ceramics®

Tecna Italia rewards the best technological investments made internationally for the manufacture of ceramics in the period 2020-2022.

Ibérica Tiles (Castel) was the winner of the Tecnawards 2022 award, in the "new player" category in the ceramic industry; The award recognizes us as the best company that has joined the sector in recent years.

Castel, is more than a style ...

Castel in the World

We are leaders in the import and manufacture of porcelain and sanitaryware. We have factories located in different parts of the world and we are recognized for our excellent porcelain.

We have different Distribution Centers around the world, located in Spain, the United States, Mexico, China, Guatemala, El Salvador, Costa Rica, Venezuela, Nicaragua and Honduras, as well as representatives in more than thirty countries.

Thanks to our excellence, we have established ourselves in the international market, registering annual sales of more than 12 million square meters in porcelain and more than 400,000 toilets.

Castel's continuous investment and reengineering in state-of-the-art machinery and technology, allow us to guarantee materials manufactured under rigorous national and international quality controls, in addition to this, the development of products in conjunction with Castel's designs and standards provide a wide range of options to our clients.

Our presence is also throughout the Mexican Republic; We have five Distribution Centers: in Mexico City, Monterrey, Guadalajara, Cancun and Tijuana, as well as more than 1,000 points of sale, which allows us to ensure the immediate availability of products for the complete satisfaction of our customers.

Castel in Mexico

We present our new production plant for ceramic floors and coverings, equipped with the most advanced technology and latest generation machinery. We are proud that our plant will be the most modern in the entire American continent.

Located in Salamanca, Guanajuato, it covers a total area of 200,000 square meters and has a production capacity of 38,000 meters per day. By 2023 it will have a total capacity of 78 thousand square meters per day.

Continuing on this path of innovation and

market.

SPC

Stone PLatic Composite (SPC) is designed to edentically replicate traditional flooring materials such as stone, ceramic, or wood, yet provide many more practical benefits:

- ✓ Water Resistant
- ✓ Redices the rosk of expansion and/or contraction associated with temperature
- 🗸 Versatile
- \checkmark High resistance to shock and impacts
- \checkmark Great insulation/soundproofing capabilities
- \checkmark Easy to install
- \checkmark Low cost installation
- \checkmark Many aesthetic possibilities
- ✓ Easy to clean

INSTALLATION RECOMMENDATIONS

for porcelain

1. Porcelain products have several shades within the same tone, so it is recommended to check the batch that comes on the side of the box beforehand, to avoid variations in the model.

2. For polished vitrified (VP) models, be sure to remove the protective wax, before or after installation, using dry sawdust and rubbing with a sponge or microfiber cloth. Important: If the placement is on walls (cladding) it is recommended to remove the protective wax before installing it.

3. Place the pieces following the direction marked by the product, they can be:

a) Drawing of the grain on the product (surface of the material).

b) The arrows, alphanumeric code or box of the Castel brand that appear on the body or biscuit of the porcelain tile.

4. Before installing the product, check that the surface is level, smooth, dry and free of wax or soap scum using a low-absorbency coating adhesive for porcelain tiles.

5. Mix the adhesive and water with an electric cement mixer, until smooth. And let the mixture rest for 5 minutes

6. Place the ceramic piece on the adhesive and make semicircles on it to adhere it better. Then, give it light blows with the mallet to get the air out. Continue the installation using the spacers, constantly checking that the floor is level. Respect the setting times according to the adhesive, to later grout.

I is recommended to place a minimum nozzle of 2 mm. (do not use black smoke or carbon joints), apply only on the joint and not on the entire surface of the piece, avoiding bad practices.

8. To clean the porcelain floor, do not use products that contain acid or ammonia. It is recommended to clean the coating periodically, using only water and a commercial cleaner with a neutral pH, non-oily and non-abrasive.

Porcelain tile care

-A dry floor adhesive (powder) should be used as a wax Floor coverings are easy to maintain and do not require any particular treatment, the methods used and the remover. Test on a small area first, apply a generous frequency of maintenance depend on the use provided. amount over a limited area, reapply if necessary and then it can be removed. If necessary, scrub with a nylon pad and rinse thoroughly with water to remove any remover For correct maintenance it is recommended: -Do not leave the covered floor dirty. residue.

-Use commercial, pH neutral, non-oil based, non-abrasive floor cleaners.

-Use clean water to rinse.

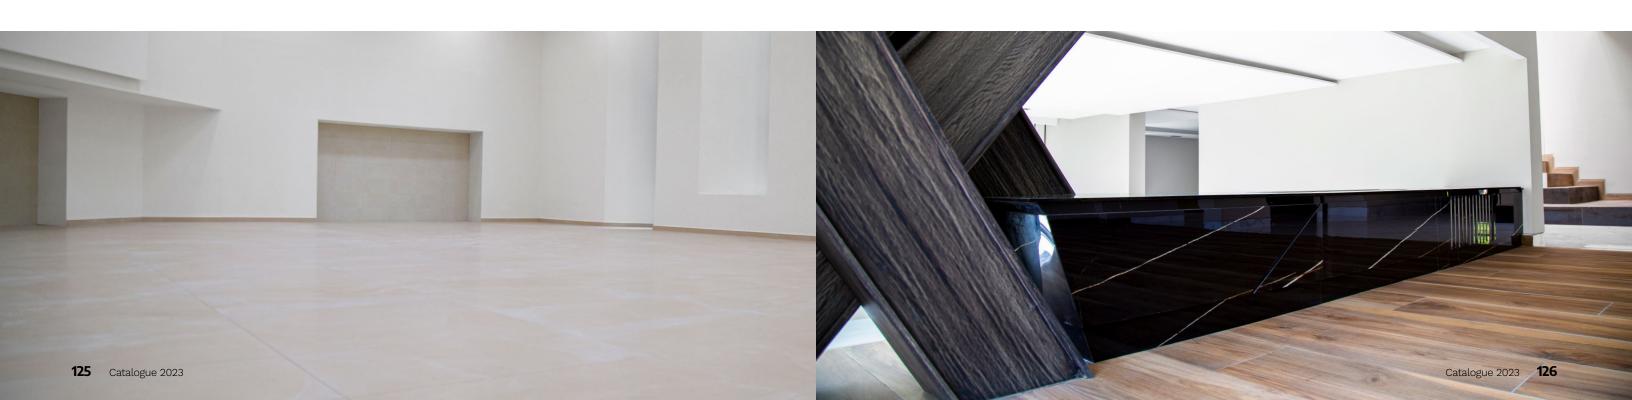

floor care routine. -Unlike more porous surfaces, glazed porcelain is generally easier to clean; It is recommended to constantly clean with multipurpose commercial products (not oily or Maintenance Tips abrasive) for the home, (the cleaner must be compatible It is recommended to use only water and a commercial so as not to affect the nozzle between the pieces of the cleaner. Do not use products that contain acid or coating) that eliminate soap residues, scale and mold. ammonia to clean the porcelain floor. -Cleaners should not contain acids or ammonia as they can damage grouts and glass floor surfaces.

-Area should be cleaned with a cotton mop, rag, sponge -It is important to take into account that all products or non-metallic brush and rinsed with clean water to have slight changes in tone, due to variations in the raw remove any residual cleaning solution. material and production processes. -Never use muriatic acid.

-The colors shown in this catalog are not exactly the -Enameled porcelain should be cleaned frequently with same as the actual product, it is important to take this a floor cleaner that has a neutral pH, as these remove consideration into account when making a purchase grease, oils, and stains. decision.

Nozzle

-The nozzle is the material used to cover the joints of the covering pieces, the appearance of the nozzle is an essential part of the aesthetic part of the porcelain floor installation, so its care is of the utmost importance. -It is convenient to select the color of the nozzle according to the color of the porcelain; acids and ammonia can damage it.

CARE AND MAINTENANCE

How to remove sealants and waxes?

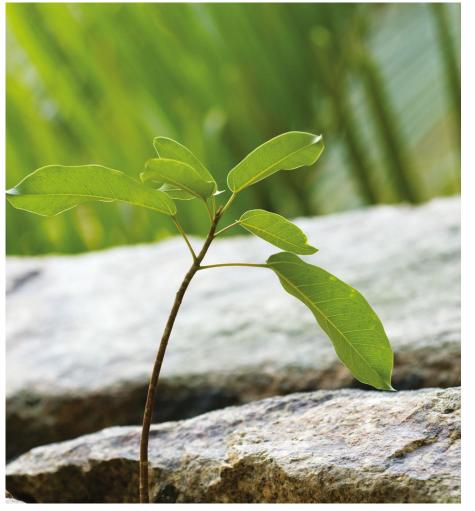

Note: This process should not be used on natural stone veneers

-Do not use cleaners that contain acid in your porcelain

About products

-If there are doubts about which is the best porcelain tile for the different areas, contact us to be advised on the ideal product according to your needs.
